Omar Takrouri

Data & AI Specialist | Business Analytics | Digital Transformation | KPI Strategy

Email: omartakroury@gmail.com | Phone: +963994548586 | LinkedIn: https://www.linkedin.com/in/omar-takrouri/

Professional Summary

Data & AI Specialist with 2+ years of experience in construction-related operations (elevators, escalators, and moving walkways), specializing in business analytics, KPI architecture, AI-enabled internal products, and operational decision support.

Experienced in translating business challenges into measurable frameworks by designing KPI ecosystems, building shadow systems alongside ERP platforms, and enabling data-driven decision-making across sales, installation, planning, quality control, safety, and maintenance operations.

Core Capabilities

Business & Analytics: KPI Design & Governance, Business Analysis, Data Storytelling, Executive Reporting, Performance Management, Process Mapping, Data-Driven Decision Making

Data & Technical: Power BI, DAX, SQL, Power Query, Dashboard Design, Data Modeling, Data Validation

AI & Digital Transformation: AI-Assisted Product Development, Workflow Automation, Shadow Systems Design, LLM Integration, Internal Business Applications, Requirements Gathering, Process Optimization

Professional Experience

Data & AI Specialist - KNE (Remote, Iraq)

Jan 2026 - Present

- Designed and developed internal shadow systems to extend ERP capabilities without modifying core ERP processes.

- Introduced new operational data capture methods to generate previously unavailable business KPIs.

- Used AI-assisted development workflows to accelerate delivery and maintenance of internal business applications.

- Built KPI frameworks across sales, installation, planning, quality control, safety, and maintenance operations.

- Designed Power BI dashboards and reporting layers to improve decision-making.

- Shifted operational discussions from intuition-based decisions toward measurable business performance.

- Improved visibility into field execution and maintenance activities.

- Built and shipped two AI assistants now in daily production use: an email-driven complaints board and a voice-first Arabic collections assistant.

Data Analyst - KNE (Remote, Iraq)

Jan 2025 - Dec 2025

- Developed reporting and KPI solutions for operational departments.

- Built data models and dashboards using Power BI.

- Supported business teams with analytics and performance insights.

- Improved data quality and reporting consistency.

Selected Projects

Customer Complaints Board (AI): Replaced a WhatsApp complaints group with an email-driven board: AI opens each ticket, extracts site, unit, department and issue with confidence scores, routes it to the right manager and tracks status from email replies. **+30% complaints closed rate, 90% capture rate**, 12 n8n workflows, idea to production in 8 weeks. React, Supabase, n8n, OpenAI, Microsoft Graph.

Al Jabi - Voice-First AI Collections Assistant: Telegram bot that turns Arabic voice notes from debt collectors into confirmed Trello updates, with fuzzy client matching and an AI quality evaluation of every follow-up. **+25% cash collection health, +60% clients contacted per collector per day**; 53 of 54 spoken test queries matched first. n8n, ElevenLabs Scribe, OpenAI, Trello API.

Internal Operational Intelligence Platform: Built a supporting internal system to collect additional business data, integrate operational workflows, generate new KPIs, and enable improved management visibility and faster decision-making.

KPI Framework for Service & Installation Operations: Created end-to-end KPI structures covering sales performance, installation execution, quality metrics, safety tracking, and maintenance operations.
